

The Learn To Fly Saturday

On The 4th Saturday of Every Month, 8:30 - 11:00 AM, members of the Experimental Aircraft Association, Indian River Chapter 99, gather at the airport to share their love of flying. They open up their hangars to show off their airplanes, let you take a look at their building projects, set up a flight simulator for you to try your skill of flying and are ready and willing to chat to you in a casual atmosphere. It's like an open house at the airport - every month - and it's free!

The members of EAA Chapter 99 are looking forward to answering your questions and to helping you:

On Your Way of Getting Up In The Air!

Building

Building Your Own Plane

Take a look at what can be achieved. Along with distinct cost saving comes a learning experience and sense of achievement that is hardly reached by simply buying a plane. By the way - most home built planes are of better workmanship than factory built airplanes.

Airplanes

What makes them fly

Talk to pilots and owners about their airplanes on display. They can explain what all the strange parts of an airplane are and why they are there.

Pilots

They've Been There, Done That

Ask pilots how they became involved in Aviation. Flying is fun, and now with the new Sport Pilot rule, it is much more affordable than you might expect.

Flight Simulator

The Safety Net

Try flying in the safety of our flight simulator. If you can fly the simulator, you can fly a plane!

Introductory Flights

Here are some options to give you a taste of piloting a plane. Do some research and find out which one is right for you:

- You are between 8 and 17 years old
Pilots who are members of the Experimental Aircraft Association may offer introductory flights to kids and teens. You will find all the details about this program at the EAA Young Eagles website www.young eagles.org/programs/youneagles/
Also check out the Cadet Orientation Flight Program of the Civil Air Patrol at www.cap.gov
- Local Flight Schools
Booking an introductory ride at a local flight school may be less expensive than you think.
- Get help from AOPA
The Aircraft Owners and Pilots Association AOPA provides information which will help you evaluate flight options and training providers. Go to <http://flighttraining.aopa.org> for details. Additionally AOPA offers the AOPA Mentor Program at flighttraining.aopa.org/projectpilot
- The Experimental Aircraft Association
EAA's Guide to Learning to Fly and Light-Sport Aircraft can be found at eaa.org/learntofly.

After having carefully chosen the pilot/training provider you trust:

Go Flying!
